

## **Teaching and Learning Enhancement (TALE) Center**

# **TALE Teaching Tip:**

## Getting Better: Checking in with Students to Improve Teaching & Learning

**End of Semester Student Evaluations (ESSE)** provide no insight on how we can improve our teaching as the semester progresses. ESSE provide data on the collective student perception, and they do not provide insight on student learning (even though they are used as a proxy to measure teaching effectiveness). Because we collect at the end of the semester, ESSE create little incentive for students to offer constructive feedback. Knowing these potential limitations, we should consider the advantages of periodically checking in on our teaching effectiveness and student learning to determine what is and is not working. We make discoveries on improving our teaching practice and encourage students to reflect upon what behaviors promote deeper learning.

### Advantages to "mid-semester" evaluations:

- Create opportunities for reflection upon teaching and learning;
- Improve teaching, student learning, and end of semester evaluations;
- Develop an ability in students to provide constructive feedback; and
- Improve your teaching practices and student learning behaviors.

In addition, we may also be able to tap into student motivations. Students who seek a safe and supportive learning environment appreciate when faculty take time to check in on their learning; students develop a sense that they are contributing to their learning. When you conduct an evaluation, for example to seek student input on a new topic, assignment, or reading, you gain their perspectives, but you also create opportunities to discuss relevancy, practice transparency, and discuss disciplinary expectations or reasons for rigor and high standards. What is more, if we pose useful, reliable questions, we can uncover student confusion or working assumptions that might otherwise go unnoticed that undermine learning.

Consider using the results to offer a more well-rounded picture of your teaching (even if it is not requested). Did you use the survey results to improve student learning experiences? Did you revise your teaching techniques to increase effectiveness? Being able to discuss these results are more persuasive if you can refer to data to support your claims.

## Three Kinds of "mid-semester" Evaluations

Some types evaluate **teaching effectiveness**, while others are **formative assessment** that offer insight on the progress of student learning (and your teaching), and still others encourage **metacognition** or **self-regulated learning** (students thinking about how they learn and their behaviors).

## Anonymous?

Whether or not you should make the evaluation anonymous depends upon a couple of factors. If you are seeking honest, unrestrained feedback on your teaching, you should ensure the highest degree of anonymity. If the feedback is focused on student learning through a formative assessment or a metacognitive exercise, anonymity may ensure frank responses, but may not allow you to identify individual students who need assistance.

## **Teaching and Learning Enhancement (TALE) Center**

## Some Fundamentals

- Ask relevant, useful questions that focus on teaching and learning behaviors, not feelings.
- Avoid asking students what they "like." Maryellen Weimer recently noted that asking what students like promotes entitlement. She recommends open-ended statements, "describe the impact of policies, practices, and behavior in the course on your efforts to learn'."
- Solicit feedback on a particular class meeting, assignment, new teaching technique, readings, laboratory work, student work habits, etc.
- Explore examples and customize to your goals, style, and academic discipline.
- Tally the results and look for predominant patterns that you can make use of or report.
- Be willing to share results in a timely manner with students. Whether you decide to make alterations to the course syllabus as a result, discuss those choices with students.
- Avoid becoming defensive, yet discussing the results creates an opportunity to uncover misunderstandings or discuss the goals of the assignment or course.

Potential Questions during Spring 2020 Pandemic Disruption – Potential Adaptations for Current Semester

The **One-Point Raise** "I learned this assessment technique from a friend who is a clinical psychologist. She uses a similar technique with her clients. In the first part of the activity, you ask each student to rate an experience on a scale of 1 to 10, and in the second part, you ask them what would raise their score by 1 point. You collect their written feedback and read it outside of class. It's very simple but surprisingly powerful. "Begin by asking students to get out a blank sheet of paper. If you've prepared for this ahead of time, you can distribute a handout with the question written at the top. Pick an aspect of the course for which you would like some feedback - maybe it's the clarity of today's class or maybe it's the interest level in a topic - and ask students to rate the course on that dimension. 'Rate how interesting today's class was for you on a scale of 1 to 10.' Next, define the two endpoints of the scale so that students have a common understanding of what a 1 meant compared with a 10. Use extremes in defining these endpoints so that the students see them as widely different and are encouraged to use the full range. Don't forget your sense of humor: 'So a "1" would mean that today's class was so painfully boring that you wish you had gone to the dentist's instead of coming to class, and a "10" would mean that today's class was so fascinating that you would choose to re-watch it, in its entirety, on YouTube." Some students will smile and others will roll their eyes, but you've got their attention. Chances are you won't get many 1s or 10s in your ratings, but you'll know that a 9 is very high praise indeed. ... "Once students have jotted down a number, ask them, 'Now what would raise your score by 1 point?' Some students will identify something that was under your control - they wish you had written more on the board, spent more time discussing a video, and so on. But some students will identify something that was entirely their responsibility. I've had students indicate that their score would have gone from a 5 to a 6 if they had simply gotten more sleep the night before, or from an 8 to a 9 if they had finished the reading. Because the survey is anonymous, students generally have nothing to lose by being honest.

✓ Teaching Effectiveness

Therese Huston, Teaching What you Don't Know (2009), pp. 213-214

	mester.	le questions belo	w will help me p	ian for the secon	d half of the
1.		What are the most important things you have learned so far in this class?			
2.		•	derstand well end	•

# Procrastination Survey

Directions: Answer yes or no to each of the following questions based on what is generally true for you.

Yes	No	Question		
		1. Do you sometimes ask "what's the point of doing a task"?		
		2. Do you often put things off you don't value or aren't interested in?		
		3. Do you often think you work best "under pressure"?		
		4. Do you like to do exciting and/or risky activities fairly often?		
		5. Do you sometimes give up before you start a task because you don't know where to start?		
		6. Do you often try to do several things at once, not completing many?		
		7. Do you sometimes settle for mediocre results when you cold do better?		
		8. Do you often put things off you're not good at?		
		9. Do you often give up on a task when it gets difficult?		
		10. Do you often lose motivation in the middle of a task?		
<b>E</b> n	coura	Age Metacognition http://www.rit.edu/studentaffairs/asc/college_programs /lng_pwr/index.php?l1=1&l2=4&l3=1&location=141 (accessed on 29 June 2009).		

<sup>37</sup> Be aware that there is a difference between procrastination and prioritizing work which might appear to be procrastinating.

## Pre- and Post-Exams/Quiz Surveys

Before the exam:

- Students rate confidence to answer questions or perform tasks (e.g. very confident; somewhat confident; not sure; Not at all Confident. Or "I do not understand the question or task." Or "I do not understand the technical terms." Or "I do not think I can give a correct answer."
- Creates an opportunity to discuss objectives and for goal setting and self-testing.

After the exam

- Survey students on how they prepared and the effectiveness of their strategies.
- Have students discuss and share results to exchange strategies for study.
- Create opportunities to correct the errors or revise.
- Encourage students to write a reflection piece or compose a promise statement that discusses how they will improve study strategies.

Encourage Metacognition

### Should you evaluate when our teaching has been disrupted dramatically?

As the COVID 19 Pandemic developed, we had a crash-course on using distance ed tools to As the COVID 19 Pandemic developed, we had a crash-course on using distance et dools to adapt our face-to-face classes. Teaching is relational, it's about how we connect with our students, not just about the disciplinary expertise that we bring to the classroom. Being out of the classrooms currently proves how much we miss the energy of our students. It may be worth our time to get student feedback on our adaptations and encourage students to reflect upon their learning behaviors. The attached includes multiple examples meant to inspire. BOLT does have a survey tool, though you may be just as comfortable using Google Docs or Qualtrics. In addition to encouraging you to adapt the examples provided, I have searched for ideas on potential questions to pose.

#### Here are some ideas roughed out in draft form:

- The suspension of face-to-face courses led me to adapt in the following ways [list them]
   .... Describe the impact that these adaptations had on your efforts to learn.
- In adapting to teaching remotely, I made the following choices [ist them] ... which one did you find most useful to your learning, which one was least useful. In adapting to teaching remotely, out of the following adaptations [list them] which one did you find most helpful to your learning. Why? Which was least helpful. Why? •
- .
- Pose questions about how you organize content in BOLT, how you chose to communicate, distributed readings, assignments, gave quizzes/exams, availability to consult
- Find ways to adapt these questions to a likert-scale if you prefer quantitative data.

## Some questions to ask about student experiences with learning remotely and their behaviors:

- If you are struggling with the move to learning remotely, what are the main reasons for these struggles?
- •
- These struggles? Are you facing resource limitations or unexpected demands on your time that are undermining your ability to study? Explain. Did you have sufficient access to technology to participate fully in the course? Did you struggle with adapting to remote learning? What are the causes for these struggles? How well have you adapted to these challenges? How much time have you dedicated to studying ... [recorded lectures, readings, posting to the discussion heard dedi2. To what a cause the discussion for the participate fully and the struggle struggles? •
- to the discussion board, etc]? To what extent did your situation influence your ability to Study? How effective was my choice to go synchronous, asynchronous, or some combination of both? Elaborate on your response. •

Ideas Posted in Spring 2020 when we were forced to teach remotely. Some questions might be adapted to current teaching contexts.
