

To install the Bloomsburg University Weather Viewer, the following system requirements must be met before install:

- 64-bit installation of Windows (Windows 7 recommended)
- 64-bit installation of Java Runtime Environment (JRE 7 recommended)
- 64-bit installation of VideoLAN VLC (Version 2.1.3 recommended)
- Space required:
 - Weather Viewer Client – 44.0 MB (**will change**)
 - Java JRE 7 (if not already installed) – 118 MB
 - VideoLAN VLC (if not already installed) – 101 MB

If you do not already have a compatible installation of Java or VLC, the installer will deploy these required programs to your computer. **Important Note:** *Please make sure that you are installing as an administrator so that you have the appropriate access rights to complete the installation process.*

To install:

1. Download and double-click BUWeatherViewer-ClientInstaller.exe
2. If prompted, click Run to continue launching the installer, then click Next
3. Please read the license for detailed information about the usage of the Bloomsburg University Weather Viewer. Select the appropriate radio button, and click Next
4. By default, the installer will create a folder and shortcut on the Start Menu. If you do not wish to have this folder created, select the “Don’t create a Start Menu folder” checkbox, and click Next
5. By default, the installer will create a desktop shortcut. If you do not wish to have this shortcut created, de-select the “Create a desktop icon” checkbox, and click Next
6. If you wish to change any options to this point, do so now. Once you click Install, the installer will not allow you to change anything unless you run the installer again after it completes the installation.
7. After the installer copies the program files into place, you can either click next to launch the Weather Viewer by default, or de-select the “Launch BU Weather Viewer” checkbox, and click Finish

Congratulations! Thank you for downloading the Bloomsburg University Weather Viewer Client!
